

Q-WHOLE DIAGNOSTIC STUDY

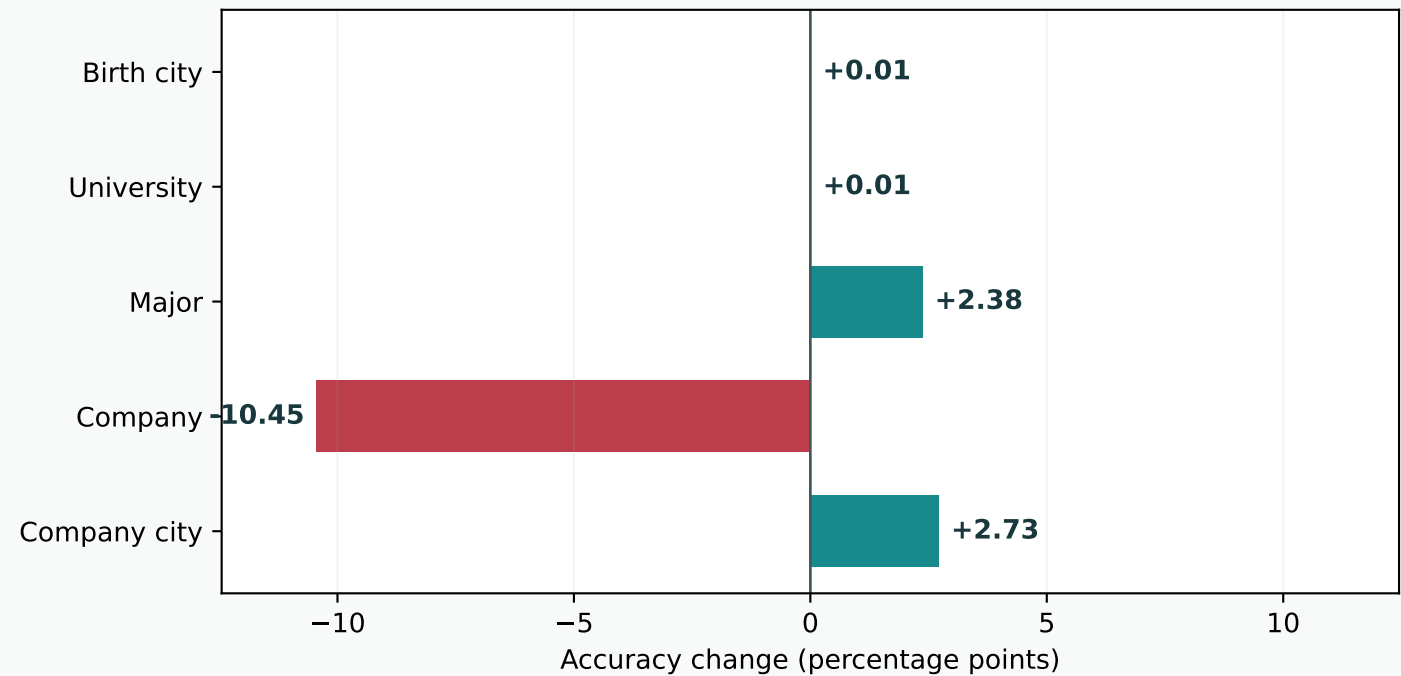

Two inference-only tests of token-conditioned readout and MoE route structure

ORACLE NET -1.06 pp

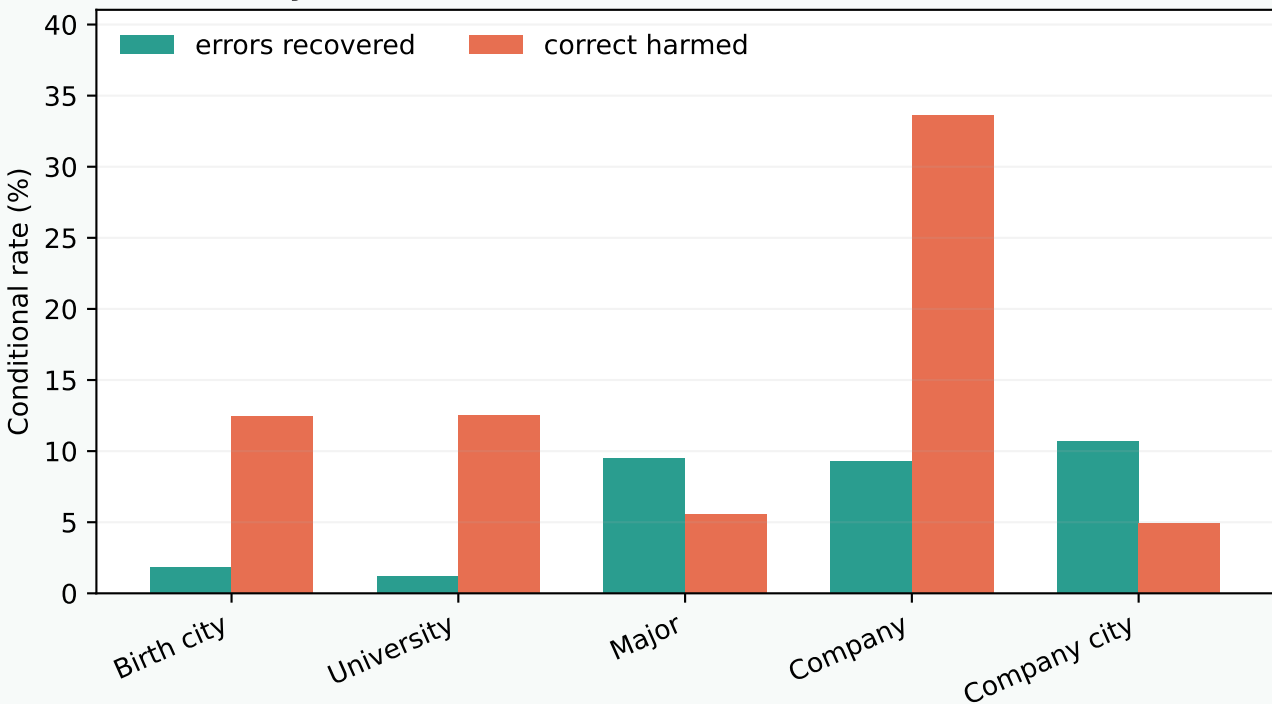

BAD CASES 162,044

ROUTE DiD +0.205

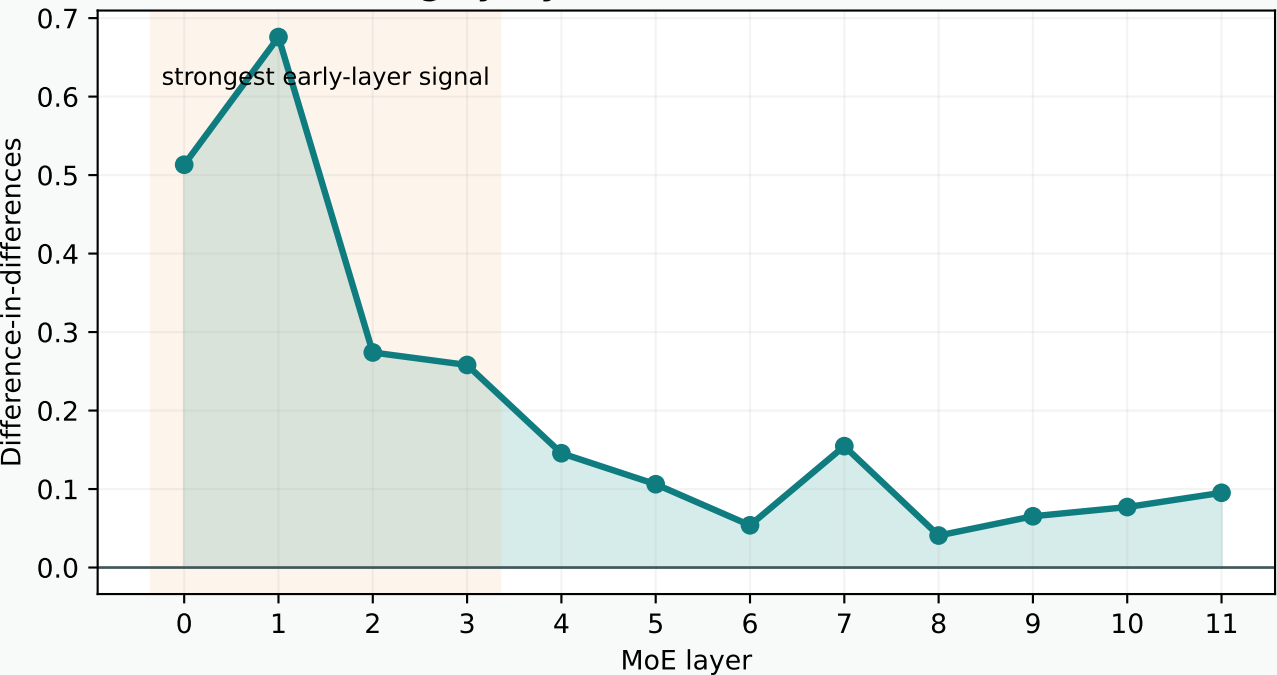

A Oracle intervention effect

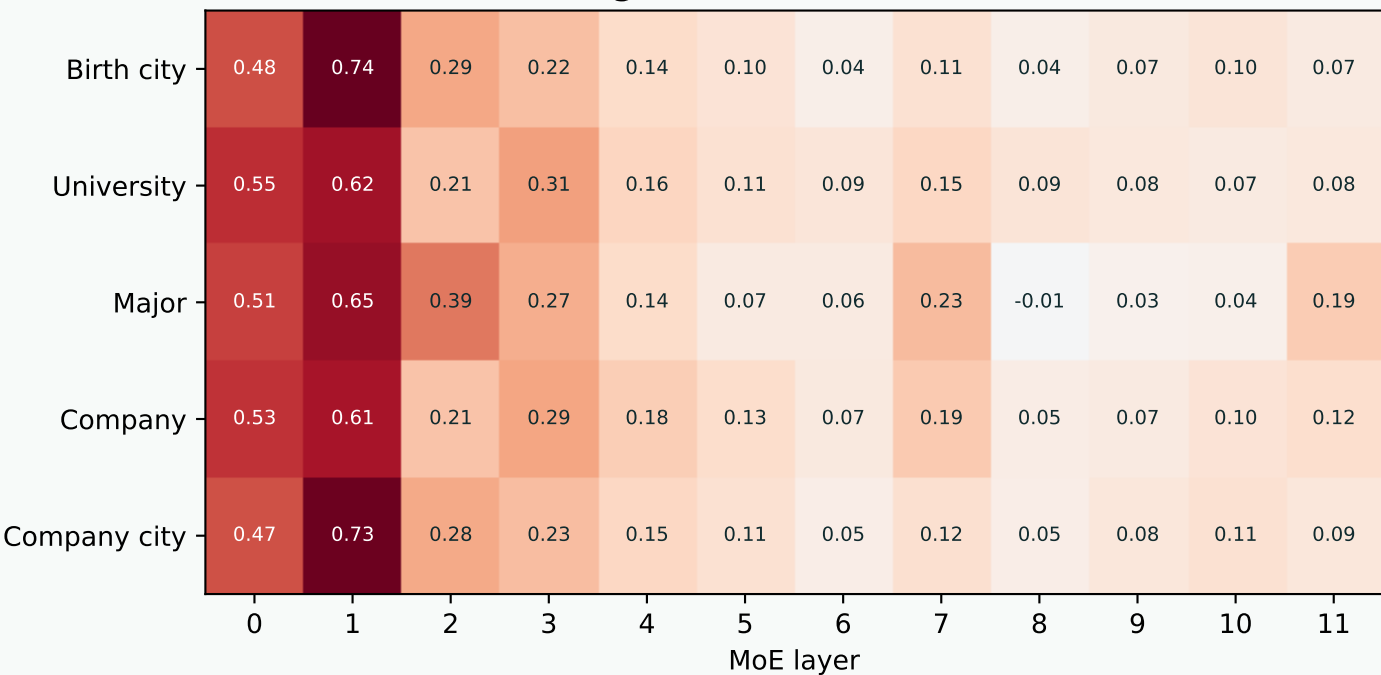

B Recovery-harm trade-off

C Route branching by layer

D Controlled branching contrast

Scope: multi5+permute formal · 50,118 held-out people per attribute · unchanged probes. Route contrasts are descriptive and conditioned on Q-first-correct/Q-whole-wrong cases.
